Amendments to the Claims:

This listing of claims replaces all prior versions, and listings of claims in the instant application:

Listing of Claims:

1. (Currently amended) A method comprising:
comparing outbound traffic on a host computer system to inbound traffic on the host computer system, wherein the inbound traffic is received on the host computer system from a source external to the host computer system, and wherein the outbound traffic is generated on the host computer system for transmission from the host computer system to a destination external to the host computer system;
determining if malicious code is detected on the host computer system based on the comparing; and
when malicious code is detected, providing a notification of the malicious code detection.
2. (Cancelled)
3. (Original) The method of Claim 1, wherein the comparing is performed using a similarity comparison technique.
4. (Original) The method of Claim 1, wherein at least a portion of the outbound traffic is compared to at least a recently received portion of the inbound traffic, the at least a portion of the outbound traffic being subsequent in time to the at least a recently received portion of the inbound traffic.
5. (Original) The method of Claim 1, wherein the inbound

Reply to final Office Action of July 30, 2007

traffic is received at the host computer system from a source port,

and wherein the outbound traffic is for sending to a destination port,

and further wherein the source port and the destination port are the same port.

6. (Previously presented) The method of Claim 1, wherein the inbound traffic is received on the host computer system from a source port,

and wherein the outbound traffic is for sending to a destination port,

and further wherein the source port and the destination port are different ports.

7. (Previously presented) The method of Claim 1, further comprising:

implementing protective actions.

8. (Previously presented) The method of Claim 1, further comprising:

intercepting the inbound traffic;

copying the inbound traffic to an inbound traffic memory area, the copying the inbound traffic generating copied inbound traffic;

releasing the inbound traffic;

intercepting the outbound traffic;

copying the outbound traffic to an outbound traffic memory area, the copying the outbound traffic generating copied outbound traffic; and

releasing the outbound traffic.

9. (Original) The method of Claim 8, wherein the comparing comprises:

comparing at least a portion of the copied inbound traffic with at least a portion of the copied outbound traffic.

10. (Previously presented) The method of Claim 1, further comprising:

- intercepting the inbound traffic;
- copying the inbound traffic to an inbound traffic memory area, the copying the inbound traffic generating copied inbound traffic;
- releasing the inbound traffic;
- intercepting the outbound traffic;
- buffering the outbound traffic in an outbound traffic memory area, the buffering the outbound traffic generating buffered outbound traffic; and
- if malicious code is not detected releasing the buffered outbound traffic.

11. (Original) The method of Claim 10, wherein the comparing comprises:

comparing at least a portion of the copied inbound traffic with at least a portion of the buffered outbound traffic.

12-14. (Cancelled)

15. (Currently amended) A method comprising:

- intercepting inbound traffic on a host computer system, wherein the inbound traffic is received on the host computer system from a source external to the host computer system;
- copying the inbound traffic to an inbound traffic memory area, the copying the inbound traffic generating copied inbound traffic;
- releasing the inbound traffic;
- intercepting outbound traffic on the host computer system wherein the outbound traffic is generated on the host computer

system for transmission from the host computer system to a destination external to the host computer system;

copying the outbound traffic to an outbound traffic memory area, the copying the outbound traffic generating copied outbound traffic;

releasing the outbound traffic;

comparing at least a portion of the copied inbound traffic with at least a portion of the copied outbound traffic;

determining if malicious code is detected on the host computer system based on the comparing; and

if malicious code is detected, providing a notification of the malicious code detection.

16. (Original) The method of Claim 15, wherein the comparing is performed using a similarity comparison technique.

17. (Original) The method of Claim 15, wherein the at least a portion of the copied outbound traffic is subsequent in time to the at least a portion of the copied inbound traffic.

18. (Original) The method of Claim 15, further comprising:

prior to the copying the outbound traffic, if the outbound traffic correlates to a prior name resolution lookup performed on the host computer system, releasing the outbound traffic.

19. (Original) The method of Claim 15, wherein the inbound traffic is copied to the inbound traffic memory area on a per port basis,

and wherein the outbound traffic is copied to the outbound traffic memory area on a per destination port basis.

20. (Currently amended) A method comprising:

intercepting inbound traffic on a host computer system,
wherein the inbound traffic is received on the host computer
system from a source external to the host computer system;

copying the inbound traffic to an inbound traffic memory
area, the copying the inbound traffic generating copied inbound
traffic;

releasing the inbound traffic;

intercepting outbound traffic on the host computer system
wherein the outbound traffic is generated on the host computer
system for transmission from the host computer system to a
destination external to the host computer system;

buffering the outbound traffic in an outbound traffic
memory area, the buffering the outbound traffic generating
buffered outbound traffic;

comparing at least a portion of the copied inbound traffic
with at least a portion of the buffered outbound traffic;

determining if malicious code is detected on the host
computer system based on the comparing;

if malicious code is detected, providing a notification of
the malicious code detection; and

if malicious code is not detected, releasing the at least a
portion of the buffered outbound traffic.

21. (Original) The method of Claim 20, wherein the
comparing is performed using a similarity comparison technique.

22. (Original) The method of Claim 20, wherein the at
least a portion of the buffered outbound traffic is subsequent
in time to the at least a portion of the copied inbound traffic.

23. (Original) The method of Claim 20, further
comprising:

prior to buffering the outbound traffic, if the outbound

traffic correlates to a prior name resolution lookup performed on the host computer system, releasing the outbound traffic.

24. (Original) The method of Claim 20, wherein the inbound traffic is copied to the inbound traffic memory area on a per port basis,

and wherein the outbound traffic is buffered in the outbound traffic memory area on a per destination port basis.

25. (Previously added) The method of Claim 20, further comprising:

wherein if malicious code is detected, implementing protective actions.

26. (Currently amended) A computer-program product comprising a ~~tangible~~ computer readable medium configured to store containing computer program code comprising:

a detection application for comparing outbound traffic on a host computer system to inbound traffic on the host computer system, wherein the inbound traffic is received on the host computer system from a source external to the host computer system, and wherein the outbound traffic is generated on the host computer system for transmission from the host computer system to a destination external to the host computer system;

the detection application further for determining if malicious code is detected on the host computer system based on the comparing; and

when malicious code is detected, the detection application further for providing a notification of the malicious code detection.

27. (Previously added) The computer-program product of Claim 26 further comprising:

wherein least a portion of the outbound traffic is compared to at least a recently received portion of the inbound traffic, the at least a portion of the outbound traffic being subsequent in time to the at least a recently received portion of the inbound traffic, and

further wherein the comparing is performed using a similarity comparison technique.

28. (Previously added) The computer-program product of Claim 26 further comprising:

wherein if malicious code is detected, the detection application further for implementing protective actions.
